Ecology is the study of the relationship between organisms and their environment. Through their teaching at the AA, Michael Hensel and Achim Menges have shown how this definition also suits the discipline of architecture surprisingly well: one of the central tasks for architects is to provide opportunities for habitation through specific material and energetic interventions in the physical environment. Correlating morphogenesis and ecology, they have developed a new framework for architectural design that is firmly rooted within a biological paradigm, and thus concerned with issues of higher-level functionality and performance capacity. They have named this approach Morpho-Ecology.

The first part of the book introduces the theoretical and methodological framework for their approach; the second part presents 20 research projects undertaken by students in AA Diploma Unit 4. The third part contains the proceedings of the 'Differentiated Systems in Nature and Design Symposium' held at the AA, with contributions by Mark Burry, Christopher Hight, Wolf Mangelsdorf, Peter Trummer, Julian Vincent, Michael Weinstock.
